

Status of Assignment: Complete

Hardest Part:

The most difficult part of the assignment is that running the code in a Linux environment. Specifically, the Junit tests. As I was unsure on whether it was a graded part, but when I would try to install the Junit packages onto my Linux environment it would not work. As such the executable TestCreature.java runs correctly on Linux environments but Junit files will only work on Eclipse or some other IDE.

Lines of Code: 216 Lines

Lines of Code in Unit Tests: 141 Lines

Unit Test Coverage: Junit for Java

Other:

In the Files, I created some helper functions to help test with JUnit. These helper methods include:

- getLastThingCreatureAte()
- getAnswerToWhatDidYouEat()
- getMovement()
